

3rd OPTional Activity: Sharping the Test Plan Elaboration

This activity consists of these points:

- a) **Define the set of tasks** to be carried out by users during the test. For that, consider recommendations presented in slides 18 to 23 from the *ThemeII-Part3.pdf* document (*Theme II* folder).
Related to this, start thinking about the associated **scenarios for each task**.
- b) **Define the metrics** to be applied for the non-standardized usability objectives selected for your test (if any).
- c) **Formulate** the **Pre-Test questionnaire**, the **Post-Task questionnaires** and the **Post-Test questionnaire**.

Remember, it is necessary to justify all your decisions.

Again, you can look up examples for the different points in the *UT Material/Case Studies* folder in the VC.

Additionally, you have some complementary documents in the *Additional Material* folder, such as more information regarding the SUS questionnaire, and a revision of the different standardized usability questionnaires by *Sauro&Lewis*. You also can find the SUS questionnaire in the *Template* folder.
